

Speech Recognition for Clinical Systems

Soliton IT have developed a fast, efficient and simple to use *Digital Dictation System with Real-Time Speech Recognition*. Report turnaround times can be significantly improved and the application can be seamlessly integrated to your legacy Clinical System.

- Real-time speech recognition with appropriate medical Context (dictionary)
- Simple, clean and intuitive user interface
- Fast, efficient and easy to use significantly reducing reporting times

- Can integrate with legacy clinical / hospital system
- Uses MS Word (subject to license) for document creation
- Different (user definable) document templates available from 'drop down' list
- Automatic completion of Patient demographics from departmental / hospital system interface
- Worklists are provided for efficiency and ease of use
- Easy to find historic documents with 'drop down' filters and efficient document retrieval
- Uses .NET technology and is ODBC compliant

powered by
SpeechMagic™

This Soliton IT product is a .NET application. The design follows the standard for distributed applications for .NET. The distributed nature of the application provides built in long-term scalability.
