OVERVIEW

Radiology+ Mobile meets logistical and administrative requirements by incorporating a full radiology workflow into a tablet and Smartphone application. It can be used to identify patients, add and complete examinations and complete user-defined forms - including capturing the patient's signature - all from a portable device. Compatible with a wide range of devices, Radiology+ Mobile has been designed to allow clinical staff to interact with RIS whilst still being with their patient, thereby increasing efficiency and enhancing patient care.

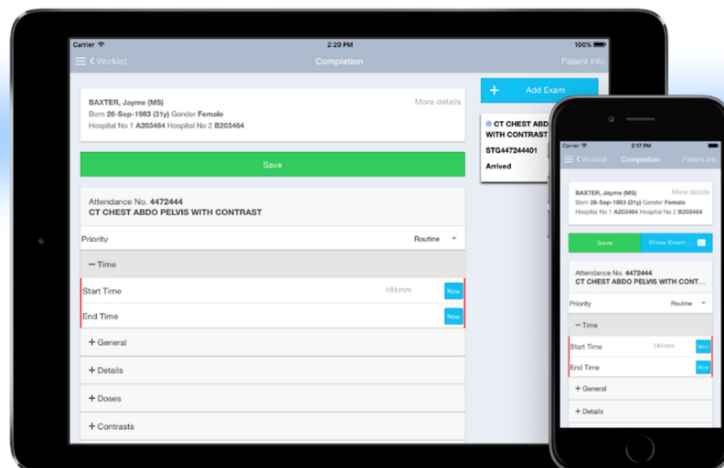

AN EXTENSION TO DESKTOP RIS

Radiology+ Mobile is easy to deploy and works with the desktop client database. This means data is always up to date - logins, permissions, passwords and workflow are the same as the desktop application. To optimise security measures, no data is held on the device and users can create and edit studies as required. With multiple concurrent sessions on one device, Radiology+ Mobile is the ideal mobile workflow tool for a Radiology department - allowing Radiographers to spend significantly less time on data entry.

USER-DRIVEN INTERFACE

The same intuitive functionalities of Radiology+ have been applied into the Mobile application, including a concise and form-oriented interface. As most staff are familiar with mobile app use, many organisations are adopting Radiology+ Mobile to suit their busy schedules, location variables and departmental practices.

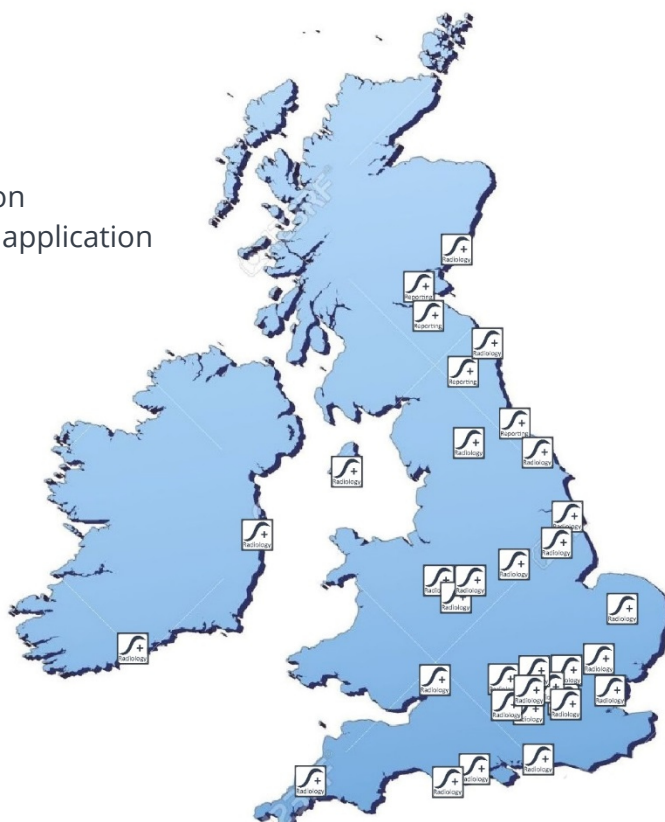

RADIOLOGY+ MOBILE - KEY FEATURES

- Compatible with Android and Apple devices
- Multiple sessions on one device
- Fast User switching between sessions
- List of patients "in progress"
- Selectable worklists
- Configurations and rules set in desktop application
- Add, register, edit or complete studies within the application
- Add custom user forms
- View scanned documents
- Search or use worklists
- Sharing rules and site configuration available
- Patient Matching

EXISTING USERS

- Soliton IT has installed sites in over 110 Hospitals in the UK and 11 Hospital groups in Australia
- Users range from small private clinics to large teaching hospital groups
- Multiple organisations can share a single RIS with configurable sharing permissions
- 25% of UK NHS Acute Trusts use Soliton IT's solutions
