

### .NET junior Software Developer

Your role will involve working within the Software Development Team. You will be developing new software as well as maintaining the company's existing product suite.

As a .NET junior Software Developer your responsibilities will include

- Work to develop the next generation of the company's software products, as well as help to ensure the existing product suite is maintained to the highest standard.
- Help ensure new functionality and products are fully tested.
- Integrate and work within the development team on various projects.
- Be motivated to continue learning, and help introduce new technology to the team.

The correct candidate will preferably have knowledge or experience in the following:

- Educated to degree level in a Computer Science or related subject.
- C# .NET Framework and WPF development experience.
- Good knowledge of SQL / T-SQL.
- Experience of ASP.NET, HTML, CSS, JavaScript / jQuery.
- WCF / OData experience preferred.

Please note; Soliton IT is fully set up for a remote interview and is following Government guidelines on the Covid-19 outbreak. The start date of the position will be dependent on the advice given by UK Government.
